GP Connect

Programme Briefing - InterOpen
Glenn Collett, Programme Manager

Vision

GP Connect aims to

*support **better clinical care***

*by **opening up information** and data*
held within GP Practice IT systems.

Approach

The GP Connect vision will be achieved

*by **standardising integration**,*
and simplifying the operating model.

Scope

- Development of API standards:
  - Get Record
  - Appointments
  - Tasks
- Development of Spine central services
- Implementation of a service wrap
- Implementation of commercial model to support post 2018 environment
- Implementation of an IG model to support First of Type deployment

GP Connect

Programme approach

| Central Development	Standardisation	Service
• Spine development • API specification	• Introduce FHIR based standards • IG standards • Clinical safety • Security • Assurance and automation	• Supplier ecosystem • Journey into service process • Provider/Consumer support service

Commercial model (Support post 2018)
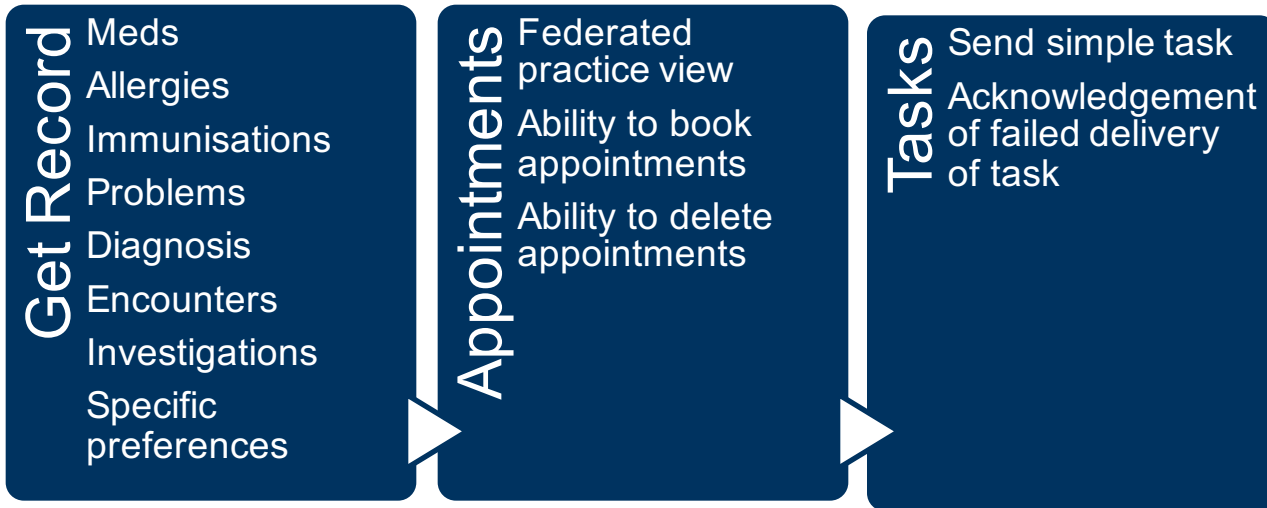

IG model (First of Type deployments)

GP Connect

Technical – Spine services

Technical – API development

Get Record
- Meds
- Allergies
- Immunisations
- Problems
- Diagnosis
- Encounters
- Investigations
- Specific preferences

Appointments
- Federated practice view
- Ability to book appointments
- Ability to delete appointments

Tasks
- Send simple task
- Acknowledgement of failed delivery of task

Get Record potentially will be delivered over several iterations and phases with the market driving forward potential uses.

Appointments will enable federated practices initially as it will allow them to see multiple appointment books from different systems.

Tasking will initially be quite simple but has the ability to develop significantly.
